# Screencasting via AirServer & Solstice

Last Modified on 08/22/2025 9:39 pm EDT

This article provides instructions on how to use AirServer & Solstice to wirelessly share your device's screen to the monitors in the classrooms and GSRs.

## Before you begin

- The device you want to share wirelessly must be connected to AirPennNet or AirPennNet-Device.

**NOTE: AirPennNet-Guest is NOT recommended** for students, faculty and staff who want to connect to the wireless network. This option is designed for guests at the University and has limited bandwidth.

## Classrooms

### Logging In

Wharton classrooms use AirServer to allow projection from devices to the screens. You must first log into the classroom's computer and set it up to accept device shares: [Read More](#) 

### Connecting devices to AirServer

To project your device's screen to the classroom's screen(s) you just need to choose AirServer -- directions vary depending on your device.

# GSRs

[?Top](#)

Group Study Rooms use Solstice to allow you to share your device with a GSR screen. There are two steps to follow:

1. **Solstice software must be installed** on the device you want to share from, and you'll need to launch the software.
2. **Solstice must be launched** from the classroom or GSR screen (it's already installed on these systems).

To use Solstice in Wharton's Group Study Rooms: [Read More ?](#)

## Install and Use the Solstice Client

To project your device's screen to the room's screen(s) you need to install the Solstice client.

## Troubleshooting Steps

[?Top](#)

### Can't see the list of displays on my laptop/mobile device

Open Solstice Client on your device, click/tap Settings, and ensure **solstice.wharton.upenn.edu** is entered for Solstice Directory Service Address.

### Can't connect to a display from your device

Make sure you are connected to AirPennNet or AirPennNet-Guest. A device connected to any other network (including cellular networks and private hotspots) will not be able to share to Solstice. If you are using AirPennNet-Guest, you won't be able to use Solstice Directory Service – instead, you'll need to enter the IP address displayed on the room's screen.

### Can't see the room you're in from your device

Tap Wireless Presentation on the touch panel to ensure Solstice Display is open. Close and reopen Solstice Client

on your device. If the display still doesn't appear, click/tap **Enter IP** in Solstice Client and enter the IP Address from Solstice Display.

### **Trouble scrolling when in Full Screen Mode**

If you're in full screen mode, there is no way to scroll. You need to minimize or exit the system, choose a new screen, and then go back into full screen mode. [Read More](#) 

### **Screen displays sideways**

If your screen displays sideways you'll need to rotate the picture within the photo app on your phone. This is a limitation of the software which we are hoping will be remedied in future releases.
