

Wharton Passwords: Guidelines and Tips

Last Modified on 03/22/2021 4:50 pm EDT

This article outlines tips and guidelines for creating passwords for both PennKey and Wharton. Both accounts share the same password requirements.

To change your password, see [Change / Reset Password](#).

NOTE - To help take the burden of complex passwords off of your shoulders, Wharton offers access to an encrypted password manager called LastPass. Find out more about how it works and [how to sign up](#).

Wharton Password Guidelines

Your Wharton password must meet differing requirements, depending on length:

Password Length	Requirements	Example (Do NOT use these for your actual password.)
20+ Characters	Any US keyboard characters.	<i>boldaugustpretzelcloud</i>
16-19 Characters	Upper and lower-case letters	<i>BoldAugustPretzel</i>
12-15 Characters	Upper and lower-case letters and numbers	<i>4Bold7August8</i>
8-11 Characters	Upper and lower-case letters, numbers and symbols	<i>\$4Bold78!</i>

Things you can't use as your password:

- Easily guessed or known compromised passwords (example: 12345678).
- Your PennNet ID, username (even backwards), and your first, middle, or last name.
- Single dictionary words, even if they meet the length requirements.

Tips for Creating a Password

Ideally, your password should be easy for you to remember, but should not make sense to anyone else.

- Avoid basing your password on your personal information such as your birthday, phone number, address, or other personal information that might be publicly available.
- String together four or more unrelated words for a long, secure password.

- Replace letters with numbers that look similar to make an easy to remember yet strong password.
 - For example, turn "Wireless" into "W1r3l3ss" or "learning" into "13arn1ng"
-
