

Two-Step Verification: Start Here

Last Modified on 11/21/2022 12:09 pm EST

Two-Step Verification is a service that provides an added layer of protection for your online accounts. After you log in with your username and password, you'll be prompted to verify your identity – the second step – using a device in your possession such as a mobile phone or key fob , or an emailed code.

All members of the Penn community have Two-Step Verification associated with their PennKey accounts; Students also have this service for their Wharton Google accounts. This article focuses on Two-Step Verification for PennKey and Google accounts.

For more information regarding various options for Two-Step, please see our [Two-Step: Methods of Verification](#) article.

Before you Start

You may need one or more of the following before you can complete this task:

- An active account (e.g. PennKey, Google)
- Administrative access to your smartphone (if you plan to install the recommended smartphone apps)

PennKey
