

# Using Safari with learning tools

Last Modified on 09/11/2020 5:54 pm EDT

This article describes how to make Safari work with Canvas learning tools.

## Privacy and Learning Tools

Learning tools approved at Wharton or Penn for use inside a Canvas site have been reviewed for compliance with the University's privacy guidelines. Each of these tools will never contain advertising and will only track your usage while working with that specific tool. However, content and privacy settings in the Apple Safari browser include features which have begun to regularly treat learning tools as "third-party" content. You may need either to change these settings in order to use Safari to access these tools, or to use one of the other [supported web browsers for Canvas](#).

## Changing Settings for macOS

- **On a laptop or other computer running macOS:**
  - Go to **Safari > Preferences > Privacy**.
  - Make certain *Block all cookies* is not turned on.
  - If you had previously chosen *Prevent cross-site tracking*, Safari should prompt you to allow tracking of tools linked from Canvas. But if such prompts don't appear, or a learning tool shows a login screen, turn off *Prevent cross-site tracking*.
    - No separate login to the ForClass learning tool is required provided the settings change is made as recommended above.

## Changing Settings for Mobile Devices

- **On an iPhone, iPad or other mobile device running iOS:**
    - Go to **Settings > Safari**.
    - Make certain *Block all cookies* is not turned on.
    - If you had previously chosen *Prevent cross-site tracking*, Safari should prompt you to allow tracking of tools linked from Canvas. But if such prompts don't appear, or ForClass shows a login screen, turn off *Prevent cross-site tracking*. (For Wharton users, no separate login to ForClass is required.)
