Which app should I use?

See our Two-Step: Methods of Verification article to determine which Two-Step method/app is best for you!

Trusting Browsers

Trusting or saving a browser means that the next time you login, you won’t be prompted for a two-step code. Only check this option on personal devices that you use frequently.

<table>

Backup Options

You should always have a second or third way to authenticate with Two-Step, in the case that your primary device is unavailable. This ensures that you'll never be locked out of your account. By default, Text or Voice Message is configured during initial Two-Step setup.

- **Backup Codes (Google@Wharton; PennKey):**
  Backup codes are useful for when you don't have access to your primary Two-Step device. Having access to these codes will ensure that you always have access to your account.
  - **Pros:**
    - Always available
    - Can be stored in a personal account
    - No need for help from an Admin
  - **Cons:**
    - Limited-use
    - Must be stored in a secure & accessible location

- **Text or Voice Message:**
  - **Pros:**
    - Easy to setup
    - Can enter alternate phone numbers (i.e. family, friends, spouse, etc.)
  - **Cons:**
    - Must have cellular reception
    - Must be requested

Frequently Asked Questions

**What are the different methods of verification that I can use?**

Check out our Two-Step: Methods of Verification article!

**What should I do if I don't get a push notification from DUO?**

Open the app, tap on your account, and use the code provided.

**Why is using push notifications better than receiving codes via SMS?**

Receiving Two-Step codes via SMS is bad for two reasons: 1) you are required to have good cellular reception to receive the code, and 2) codes sent via SMS can be compromised by man-in-the-middle attacks. Push notifications don't require you to be connected to mobile data, you only need internet. This means that anywhere there's wifi, you can always get a code when you need one!

**Can I use two-step without a network or mobile data connection?**

Yes you can! Code generator apps, push notifications, and security keys all work without requiring a connection to the internet.

**Can I use two-step without my phone?**

Yes you can! For your Google@Wharton account, Google has support for security keys like the YubiKey -- you can find out more on Yubico's documentation. For Pennkey, ISC recommends that you use a SafeID keychain fob.
purchased from Computer Connection -- you can find out more at ISC's Two-Step FAQ article.
