

Submitting Videos on Canvas

Last Modified on 06/24/2021 10:47 am EDT

This article contains instructions and best practices for submitting video recordings to Canvas.

Before You Start

You will need:

- Access to Canvas
- Video File or URL Link to the Video
- A **supported browser**

Recording Your Video

If you've never used your iOS device to make videos, we recommend consulting **Apple Support** and running a few tests first. For example, iPads and iPhones will take a video in portrait mode if the device is held vertically, and videos generally look better filmed in a landscape orientation.

Recommended File Types:

Audio: .mp3

Video: .mp4

File Size: 500 MB or less

Note: We do not recommend recording videos inside Canvas itself. If your wireless connection ends Canvas may lose your recording, and the Courseware team will not be able to recover it.

Submitting Your Video

You can submit your video from a computer, or via the Canvas app on devices like **iOS** or **Android**.

Upload your video file as you would a Word document, or .pdf, by **submitting the file** to an assignment. If your video is long, upload it with a wired connection (ie, not WiFi), which will make for a faster upload and a lower likelihood of an interrupted transmission.

As with most **assignments**, you can re-submit the video if you see you something you want to correct, and your instructor will see the latest upload by default.
