

Planning a Virtual Event

Last Modified on 07/09/2020 10:01 am EDT

Virtual Events are a way to conduct larger gatherings with more control than a standard virtual meeting can provide. Events can be added to your account by a [Wharton Computing administrator](#).

We recommend limiting your events to 1,000 participants. Events larger than this may incur charges. Contact [Wharton Computing](#) for a consultation.

When to Use Virtual Events

Use Events for:	Use a Meeting for:
Events larger than 200 participants, including presenters and moderators.	Informal events or team meetings.
Controlling and tracking attendance.	Broadcasting to a large audience , via social media streaming, without the need for closely monitored interactions.
Structured interaction between presenters and attendees.	

Events Features

Some of the features that are often used at Wharton include:

- Public or Private meeting invites and links
- Event registration
- Video/Audio interaction
- Chat
- Raise hand
- Polling
- Q&A
- Recording
- Chat transcripts and attendance reports

Roles

In the Virtual Events world there are four roles:

- Meeting Organizer
- Moderator
- Presenter
- Attendee

The Meeting Organizer is the event planner. They're responsible for:

- Scheduling the Events meeting
- Inviting all participants

- Coordinating the event
- Creating the agenda and production timeline
- Overall communication for the actual event

A Moderator controls the broadcast, or event, from behind the scenes. There can be more than one moderator per event. Traditionally a moderator introduces the guests or asks them thoughtfully prepared questions. While you can (and probably should) still have a moderator of that type at your event, BlueJeans Events can have multiple people assigned the Moderator role. This means you can have a moderator who is focused on behind scenes issues in addition to someone acting as a more traditional moderator.

Moderators can:

- Help control content
- Manage the flow of the event
- Troubleshoot technical problems
- Mute/unmute presenters

Think of your virtual Event as a carefully planned production and the moderators are the people behind the curtain.

The Presenter is the person, or people, the audience is here to see. By design, the presenter role has a smaller subset of the moderator controls when they join the event. Presenters are able to:

- Mute/unmute their audio and video
- Share their content and videos
- Chat with all participants or just the moderators
- Review and answer question posted in the Q&A
- View poll results

They will rely on the moderators for more complex tasks so they can be focused on content delivery.

Attendees are the people invited to attend an event. Unlike a regular meeting, attendees will not have the ability to share their audio, video, or any content unless they are invited to do so by a moderator.

Best Practices for Meeting Organizers

Below are some best practices for managing the technical aspect of your Virtual Event.

- **Plan properly** - Work through each section of this article, no matter the size of your event.
- **Invite at least 2 moderators** - There are too many details for one person to manage effectively. At least one of the moderators should be fairly tech savvy and familiar with Virtual Events. Training can be provided upon request.
- **Conduct a test event** - Hold a dry run with all presenters and moderators at least two days prior to the scheduled event. This will help work out all the kinks and get everyone familiar with the platform.
- **Create a production timeline** - A production timeline is your agenda with technical cues written in where appropriate; it is very specific and detailed. The technical cues include, but aren't limited to:
 - When to mute/unmute a presenter
 - Q&A Sessions
 - When to initiate a poll, along with the name of the poll
 - Verbal cues for significant transitions
 - The name of the moderator assigned to a planned task
- **Upload videos to BlueJeans** - Anyone sharing videos will need to upload them to BlueJeans rather than

embedding them into a presentation. Upload times vary depending on video length. We recommend uploading videos **at least 30 minutes before your test event**. Do not wait until the day of your event to upload videos.

- **Join using the Events app** - All Moderators and Presenters must join with the [BlueJeans Events app](#). This app is not the standard BlueJeans app; be sure to recommend presenters and moderators download it ahead of time.
- **Schedule your presenter arrivals** - All presenters should not arrive at the same time. Instead schedule their arrivals in staggered 15 minute intervals before the event and have a moderator ready to help them check their audio, video, content sharing, and any video content they may present.
- **Understand each role** - Review the best practices for [Moderators](#) and [Presenters](#). It's important for you to be aware of the recommendations for each role.

Before Scheduling the Event

After you've reviewed the best practices, it's now time to start the planning process. Planning for a virtual event is similar to an on-site event in many, therefore, much of the event planning found in the [MarComm Event Toolkit](#) is relevant.

Click [Read More](#) for a list of questions you and the event planning team should think about and answer before you schedule an Event.

Before the Dry Run

Preparation is the key to running a smooth event, and we recommend you stage a dry run before your event. Click [Read More](#) for a list of tasks to complete prior conducting this dry run.

Before the Event

Complete these additional tasks before your event.

- Approve all pending registrations.
- Distribute a final copy of the production timeline to involved parties.
- Verify all presenters and moderators have the latest version of their content ready.
- Verify all video content that will be shared has been uploaded to BlueJeans.
- Recommend attendees log in 48 hours before the scheduled event time to make sure they can access event.

Additional Assistance

- Review our [Scheduling an Event with BlueJeans Events](#) and [Using BlueJeans Events](#) articles.
- Visit the [BlueJeans website](#) for more articles and videos.
- Contact your [Wharton Computing Representative](#) to request access to Events.
