Display and Screen Resolutions in Classrooms and Conference Rooms

Last Modified on 10/28/2025 1:35 pm EDT

Use this article to help you design materials for the classroom and conference room screens and displays.

Before you start:

Know Key Tech Terms: [Resolution](#) and [Aspect Ratio](#)

Learn about Classroom Options: [Classroom Overview](#)

Classroom Buildings

Here are the resolutions and aspect ratios of the classroom and conference room displays. By using these, you can design presentations that will fill the displays without blank space.

Number of Displays: # projectors in the classroom.

Number of Desktops: # separate screens visible at one time on the Resident PC.

Additional Slide Design Information

Some of these options can help with the design of your slides for classes and presentations:

- See this description of [Wharton classrooms](#) for the different teaching options.
- Connect your computer to the classroom computer using an HDMI cable, or the [Solstice wireless connection](#).
- For Templates that are pre-configured for the screens in the classrooms, see [Wharton's Marketing and Communications standards section](#).

- To make your own PowerPoints, from the Powerpoint menu, select **Design** and then slide size:

LETTERBOXING: Why is Aspect Ratio important?

If your PowerPoint is a different aspect ratio than the classroom you'll have margins on either the top or sides of your presentations that are wasted space.
