Wharton Virtual Backgrounds

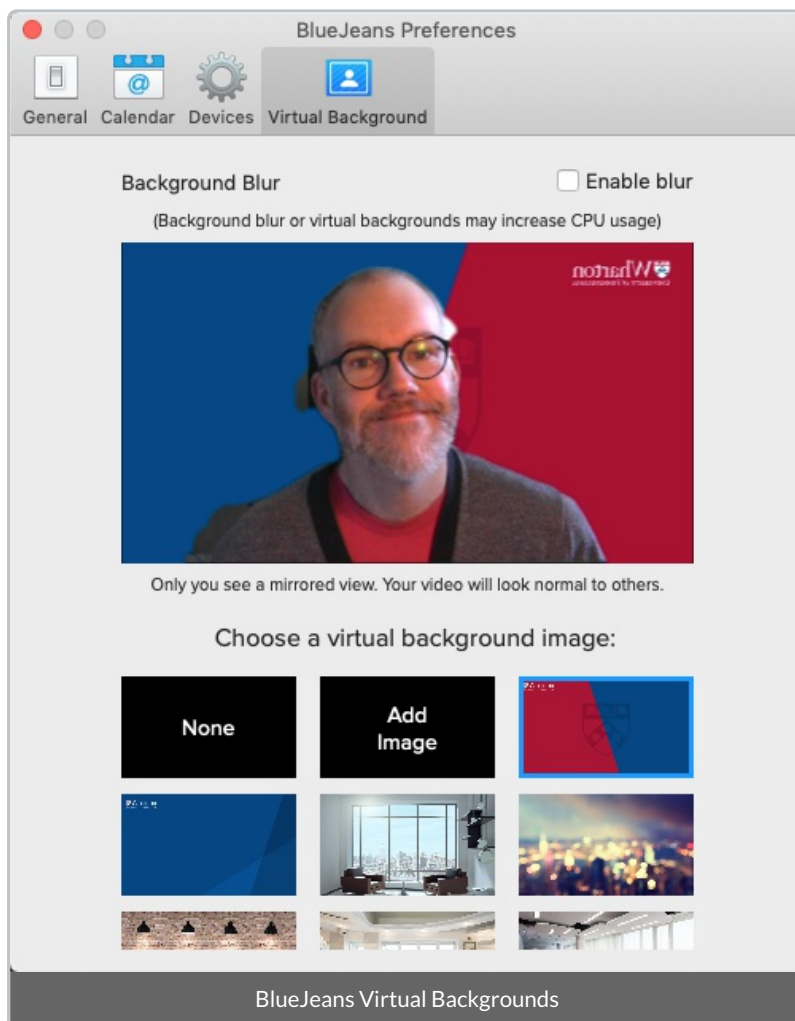

Last Modified on 08/17/2021 10:53 am EDT

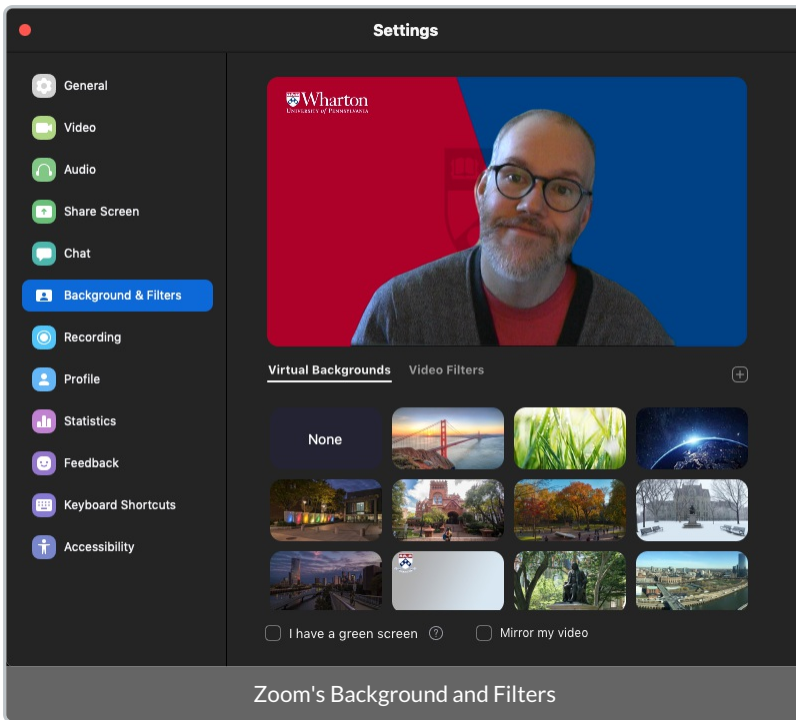

Your computer must meet the **system requirements** in order to use Virtual Backgrounds.

Both Bluejeans and Zoom support “virtual backgrounds” – pictures or movies that can be set as your background to obscure whatever is behind you on camera. A variety of Wharton Virtual Backgrounds are available for download:

Wharton Virtual Backgrounds

This feature works best with a solid background (or a green screen), and even lighting. If BlueJeans/Zoom cannot distinguish between you and the background, you will not achieve the desired effect.

Using Virtual Backgrounds

BlueJeans

In order to use Virtual Backgrounds in BlueJeans you'll need to use version 2.22.0, or later, of the desktop app on either a PC or Mac.

BlueJeans has some virtual background documentation and a video tutorial:

- [BlueJeans Virtual Background documentation.](#)
- [Video tutorial.](#)

BlueJeans Virtual Backgrounds aren't supported on **certain Macs**.

Zoom

Zoom has some documentation about how to set your virtual background in a couple of scenarios:

- [Before a meeting starts.](#)
- [During a meeting.](#)

Note: When changing your virtual background during a meeting the change takes place immediately and is visible to all meeting attendees (unless you've muted your video).
